Ning Zou

Ph.D. Candidate

School of Computing and Information

University of Pittsburgh

niz19@pitt.edu

My Ph.D. research integrates personal and health information, ubiquitous computing, and human data interaction. Specifically, my work investigates how to critically leverage human-centered computing and information systems, especially personal informatics systems, to assist persons with dementia (PwD) aging in place, and to support caregivers' personal wellbeing, from which I explore underlying information/data and interaction challenges related to personal tracking in dementia care.
